## TRADE LIST

### **Spring**, 1909

N preparing this, our Trade List for Spring, 1909, we have aimed to present our large collection of Hardy Ornamentals to the purchaser in the most concise form. With this object in mind and in view of the fact that it is intended for the trade, illustrations and descriptions have been purposely omitted.

Customers are requested to state the mode of conveyance by which they desire their trees forwarded. When no route is named we forward to the best of our judgment.

Responsibility.—After goods are placed on board cars here we assume no responsibility for their safe or prompt delivery, or any injury caused by delay in delivery by the transportation company.

All Claims MUST BE MADE UPON RECEIPT OF GOODS.

Terms Cash, on or before delivery to express or railroad agents, unless by special arrangement.

Two hundred and fifty, twenty-five or five of any one variety will be furnished at the thousand, hundred and ten rates, respectively, but single plants of one or more varieties will not be sold at less than 15 cents each, except Vines and Herbaceous Plants, the minimum price of which will be 10 cents each.

Packing Charged Extra, but only sufficient to cover cost of time and material consumed in the work.

Post Office Orders payable at Dresher P.O., Montgomery Co., Pa. Postal Telegraph Office, Dresher, Pa.

Visitors are always welcome and should take train at the Reading Terminal, 12th and Market Streets, Philadelphia, for Camp Hill Station, or at Broad Street Station, Pennsylvania R. R., for Fort Hill Station. Be sure that the train you take stops at these stations.

Notice.—It is necessary that you should Telephone us (Bell Phone, 226 Ambler; Keystone Phone, 652-Y), in advance of your coming, so that we can send a carriage to the station for you. Our office is 21/2 miles from either station

#### THE COMMONWEALTH OF PENNSYLVANIA

DEPARTMENT OF ACRICULTURE

### Certificate of Inspection of Nursery Stock No. 1303.

This is to certify that the stock in the nursery of Thomas Meehan & Sons, Inc., of Dresher, County of Montgomery, State of Pennsylvania, was duly examined in compliance with the provisions of the Act of Legislature of Pennsylvania, approved the 31st day of March, A. D., 1905, and it was found to be apparently free from San Jose Scale and other dangerously injurious insect pest or pests.

Dated Harrisburg, Pa., Sept. 14, 1908.
P. H. HERTZOG, Inspector.

This Certificate expires August 31, 1909 N. B. Critchfield,

Secretary of Agriculture.

## **Deciduous Trees**

The price of nursery stock is fixed according to the value of the tree offered. The value of the tree depends entirely upon the character of the stock and it is this "value" which makes prices differ in the catalogues of nurserymen. Stock that is sold at a low price is grown with the least possible expense put upon it, but at a sacrifice to the "quality." Stock that is thoroughly cultivated, grown in good soil, well manured and several times transplanted cannot be grown cheaply, but its "value" to the planter is increased, and in the long run such stock is cheaper than poorly grown stock at a "low price."

We bring up-to-date methods into the production of our goods. Our soil is especially adapted for the growing of good nursery stock. We spend thousands of dollars yearly in manures and in cultivating; besides this our trees are frequently transplanted. We cull out and burn all crooked and imperfect trees so that our customers receive full value for

the prices charged.

Intending purchasers of nursery stock should keep this in mind when comparing our prices with others. A visit to our nurseries will convince any one of the statement we make.

We call particular attention of customers to the trees marked "Specimens." These are trees that have been frequently transplanted, set wide apart in nursery rows and are well developed in every way.

2 to 2½ in calliper, high branched						
2½ to 3 in. calliper, high branched						

These trees marked as "high branched" are so marked so as to identify them from the other stock. They are really branched about eight to ten feet from the ground, and are particularly fine for street and avenue planting. The trees were transplanted two years ago. Purchasers must specify these trees when placing their order, otherwise regular stock will be shipped.

### JAPANESE MAPLES

Our Japanese Maples are not Imported stock. They are propagated and grown here. Imported stock is poorly rooted, hide-bound and of Irregular shape. It rarely succeeds and is frequently not true to name. We have been propagating our own Japanese Maples for thirty-five years and our stock will succeed where imported plants fail. The polymorphum atropurpureum are grown from layers, consequently on their own roots, and are very bushy plants. The pot grown plants will be shipped with the ball unbroken.

The Cedrelia sinensis is a tree similar in appearance and general character and habit to the Ailanthus, and will thrive
under similar conditions, but it does not have the disagreeable
odor when in flower. It is without doubt one of the best trees for street planting in cities and will thrive where no other
tree will grow.

All of the above Magnolias are of our own propagating and grown from layers, and are on their own roots. These are much healthier and better than imported stock; this is especially the case with the Halleana. Each plant will be dug with a ball of earth and the ball sewed in burlap. The conspicua are the true pure white variety.

#### OAKS

Years ago we began advocating the planting of Oaks for all general purposes; now planters realize their merits. Now they are used for every purpose. They are planted on boulevards, avenues in parks and cemeteries and more recently in the cities. It makes a permanent tree, very free from insects and is unsurpassed by any other shade tree. The Pin Oak is particularly adapted for side-walk planting in cities and seems to thrive under the adverse conditions usually found in such places.

## **Deciduous Shrubs**

The height of a shrub does not indicate its value to a customer when making comparison in prices. Some nurserymen plant their shrubs thickly in the nursery rows, thereby gaining height, but such shrubs are not bushy. A shrub that is given ample room to develop bushiness will not make the same height in a given time as those which have been planted closely together. We set our shrubs wide apart in the rows and our plants are all good bushy stock; our prices are based on this fact, and customers are given full value for the prices we charge. The shrubs marked "specimens" are large, well developed plants, that have been given ample room in the nursery rows to fully develop, they have been several times transplanted, and they are exceptionally fine shrubs for immediate effect.

The crus galli, coccinea and oxycantha make excellent hedge plants where a protective hedge is required. The plants should be cut well down to the ground when they are set out, and if this is done they they will make a good bushy hedge the first year.

### HIBISCUS MEEHANI VARIEGATA

## NEW SINGLE FLOWERED VARIEGATED LEAVED ALTHAEA

This is a new variety of the variegated leaved Althaea, the foliage showing the white and yellow variegation of the old variety, but which differs from the old variety inasmuch as the flowers open wide, and in a strong vigorous plant they are about four to five inches in diameter, while on the old variety the flowers do not open at all, but look like purple buttons.

The flower is of a purplish red color, single, and the plant

blooms profusely.

This new variety of our common garden Althaea will be found perfectly hardy everywhere the old variety has proven so.

## Evergreens

All of our evergreens are specimens. Every tree is given careful attention and such varieties as Retinisporas, etc., requiring it, are sheared as often as necessary in order to produce a bushy symetrical tree. They are all branched to the ground. We frequently transplant our evergreens and in that way, we get a mass of fibrous roots. In nearly every case, as noted in the catalogue, the trees will be dug with a ball of earth and the ball sewed in burlap. This makes the transplanting of them almost an assured success. Of course, the first cost of these evergreens dug and handled in this way, is more than common, but as the planter has practically no loss with them, he is saving money in the long run. Our stock must not be confused with low priced evergreens rarely transplanted and grown thickly together.

Per 10 Per 100 Per 1000 Abies (See also Picea) Balsamea, Balsam Fir 4 to 5 ft., with ball...... 6 00 5 to 6 ft., with ball...... 7 50 Canadensis (See Tsuga Canadensis) concolor 6 to 7 ft., with ball......50 00 Nordmanniana, Nordman's Silver Fir pectinata, European Silver Fir Azalea amoena, Evergreen Azalea 35 00 15 to 18 in., 5 inch pots..... 4 00 Biota (See Thuya) Buxus Arborescens, bush form 12 to 18 in., heavy...... 3 50 arborescens, pyramid rotundifolia, pyramids suffruticosa, Box Edging 4 50 40 00 4 to 5 in..... 50 See also Buxus sempervirens for edging sempervirens 10 to 12 in..... 2 00 15 00 18 00 150 00 15 to 18 in..... 2 50 2 to 2½ ft..... 7 50 60 00

The 10 to 12 and 15 to 18 inch plants have been especially grown for edging purposes where an immediate edging of this height is required. Set about two plants to 1 foot and sheared to an even height, they will give the appearance of an edging which has been planted some time. Each plant carries a small ball of earth.

Visitors to our nurseries have been are	2411	inter	heted	and

Visitors to our nurseries have been greatly interested and pleased with this Juniper, which has not been found in any other nursery. The habit is like a sheared pyramidal tree box. The foliage is of a bright green color, very compact and somewhat of the character of a Chinese Juniper. It makes an excellent tub plant, or for use where an evergreen of formal character is required.

## Vines and Climbers

For Spring planting, our "pot-grown vines" are much more desirable than field grown stock. They have been established in pots for a year and they are heavily rooted. We introduced this method of growing vines many years ago and customers now prefer it to field-grown stock for Spring work. When shipping, we knock them out of the clay pots and send in paper pots.

### Hardy Herbaceous Perennials, Ornamental Grasses and Ferns

The following is a list of stock we can supply in quantity. In addition, our immense collection contains many choice kinds not here mentioned.

Send us your list of wants and let us quote upon them.

We aim to grow only first class stock and send out neither old clumps of low vitality nor microscopic divisions, but young, vigorous plants that will give immediate results.

Our standard, where kind will allow, is one year, field-grown.

### LIST OF JAPANESE IRIS

Twenty superb varieties, representing the cream of the hundreds of sorts of this beautiful flower. No two varieties exactly alike. Single and double. The wonderful Iris Kaempferi, the "Flower of Japan," is one of the most beautiful and characteristic flowers ever introduced. Words cannot describe their gorgeous colorings, their delicate tints and unique forms. There are hundreds of named varieties in cultivation, but many of the flowers are identical.

#### Double

## Meehans' Mallow Marvels

### Rich, Gorgeous, Hardy Perennial Creation

### Most Brilliant New Production of Scientific Plant Breeding

Ablaze with their immense, brilliant flowers, our field of Mallow Marvels, when in flower, was a sight to behold. Immense flowers, from 8 to 10 inches in diameter, in fiery crimson, rich blood-red, soft shell-pink and clear snowy white. Their great beauty is indescribable. The illustration is of a single flower, shown to give an idea of its general character. Picture this flower as being 8 to 10 inches across and of a fiery crimson, red, pink or white, and a plant well covered with such flowers from late July to October, and it will then convey but a poor idea of its striking beauty & Visitors to our nurseries are amazed at the wonderful show. Meehans' Mallow Marvels surpass all other perennials in profuseness of bloom, flowering propensities and brilliancy of color. From late July until October frosts arrive, the flowers continue to appear in profusion. A hybrid of our own production and brought up to its present point of form, color and beauty by careful seed selection, covering a period of several years & Absolutely hardy, the Mallow Marvels have been tested and are thriving in Canada and in the mountain portions of the Northern States, as successfully as in Georgia and Florida. Of herbaceous character. They come up year after year and thrive under varied conditions.

### Prices for Strong Two Year Old Roots

CRIMSON MARVEL (shades of Crimson)			\$1.20 each
